OBJECTIVE

Full-stack CS undergraduate (CGPA 9.2/10) seeking the Software Development Intern (AI & Full Stack) role at Nextlite to build Vanify.ai. Hands-on experience shipping FastAPI + React/Next.js products with PostgreSQL, REST APIs, and applied AI (predictive models, multi-agent orchestration, computer-vision pipelines) across national hackathons — ready to contribute to voice-AI automation and real-feature shipping from day one.

TECHNICAL SKILLS

Frontend: React.js, Next.js 14, TypeScript-ready (JS/TS), HTML5, CSS3, Tailwind CSS, PWA, Figma

Backend / APIs: Python, FastAPI, REST API design & integration, Webhooks, Spring Boot, Java Servlets/JSP

Database: PostgreSQL, pgvector, Oracle DB, MySQL, SQLite, Supabase

AI / Automation: Applied ML (predictive/health-monitoring models), multi-agent orchestration (LangGraph, CrewAI), computer-vision pipelines, prompt engineering, agentic IDEs

Cloud & Tools: AWS (deployment planning, infra/budget docs), Git, GitHub, Vercel, Solidity

EXPERIENCE

Java Developer Intern — Uptricks Services Pvt. Ltd. *May – Jul 2026*

- Completed a hands-on backend-focused internship (27 May – 26 Jul 2026): built and debugged Java backend logic, strengthening object-oriented and API-integration practices directly transferable to FastAPI/REST work.

Java Developer Intern — Syntecxhub *2026*

- Delivered three full backend projects — ATM Simulation, Inventory Management System, Hospital Patient Record System — using JSP, Servlets, and MySQL, covering end-to-end CRUD, auth, and data-layer design.

RELEVANT PROJECTS

RBU Sports Department ERP Platform *2026*

Personal Project — FastAPI · Next.js · Flutter · PostgreSQL · LangGraph/CrewAI

- Architected a FastAPI + Next.js + Flutter monorepo for a campus sports-facility booking platform, owning the full-stack build end to end and planning AWS (ap-south-1) deployment.
- Designed a multi-agent booking scheduler using LangGraph/CrewAI with Postgres+pgvector — directly applicable to building automated, AI-driven workflows like Vanify.ai's call/lead/appointment handling.
- Produced AWS infrastructure budget reports, deployment guides, and production-readiness plans, and built REST APIs connecting the frontend, backend, and scheduling agents.

AI-Enabled Real-Time Digital Twin for UAV Aero Piston Engines *2026*

Hackathon Project — DRDO/iDEX PS 26054, Smart India Hackathon 2026 — Python · FastAPI · ML

- Built a real-time digital twin fusing a physics-based simulation engine with ML-driven health monitoring for predictive fault detection — hands-on applied-AI feature development under real constraints.
- Engineered a modular FastAPI backend (API, physics engine, health/reliability engines, synthetic telemetry generator) integrated with a Streamlit dashboard for live monitoring, plus SQLite-backed audit logging for traceable decisions.

PUGMARK — Pench Tiger Reserve Biodiversity Intelligence *2026*

Hackathon Project — Forest & Wildlife Theme, Manthan 4 Yuva Hackathon — Python · Computer Vision

- Built an offline-first AI/CV platform for camera-trap footage → individual animal re-identification and analytics, 100% CPU-only — ships production-grade AI features under tight resource constraints, with results served via REST APIs.

SarvaVote — Accessible Digital Voting System *2024 – 2025*

Team Project — Top 25 Finalist, ByteQuest National Hackathon

- Engineered core backend features (voter authentication, one-vote-per-user enforcement, cryptographically secure vote confirmation) via REST APIs — full-stack backend delivery on a team product.

KEY COMPETENCIES

Full-Stack Development (React/Next.js + FastAPI) · REST APIs & Webhooks · PostgreSQL/SQL · Applied AI & Automation (multi-agent, ML, CV) · Git/GitHub · Debugging & Testing · Fast Learner · Problem-Solving
